REPORTER

JANUARY 2013

THE MONTHLY SOURCE FOR RUTHMAN COMPANIES EVENTS AND INFORMATION

From Great Southern Pump *Gusher Pumps at work..*

Shown here are Gusher pumps that were installed at Orange County South Regional WTP in Orlando, FL. This project was sold to FUJI Electric who designed an Ozone Generating System.

They are utilizing all Gusher 7071 series ANSI pump for three pump skids. The ozone generating skids use the Gusher pumps for a closed loop deionized cooling water system through the ozone generating electrodes (picture of pump mounted on skid), a cooling water system for the control panel (pictures taken of three pumps side by side in room) and the injection system (pictures taken outside under the canopy).

Thanks to Chris Hayter for the great photos.

Beresford “Baby Range” Self Primers

Birmingham Pump Supplies, working with Darrell and Jimmy in China have rejuvenated reliable Beresford “Baby Range”... a regenerative self-priming pump with maximum suction lift.

Keith Pearson commented that the quality of casings and machining was exceptional and found a massive 17% increase in performance with no detrimental worry with the

existing motor size. “The pump looks sharp and modern and we are also working on a new company image, see attached.” We have achieved ATEX approval, and dropped all combinations of material to standardise on 316 SS , with Crane 109 PTFE seals, so we can now target food processing, Distilleries and are now progressing to do the same on the Plastic Chemical Range.

On top of this, the original design of motor was a special straight shaft, which made us reliant on a specific manufacturer, but we have now designed an adaption to fit a standard IEC European motor, which means we can purchase off the shelf from anywhere and not contend with long delivery times.

Special note of thanks to Beth Wood for a great job organizing the product development on this project!
